Summary

Front End Web Developer with knowledge in making slick & fast websites. I enjoy coding in general. Since these are initial years of my career, I am looking to work at a place where I can push myself to challenging tasks, contribute to the company based on my skills and keep on improvising my technical knowledge on the way along. I also love applying software architecture design principles to improve the code and I'm always enthusiastically grabbing onto new frameworks and principles I can integrate into the coding web in my head. Software development and web design calls to my passions. It incorporates problem solving, creativity and constantly learning new skills.
